Burndown report:

Sprint

SCRUM Sprint 1

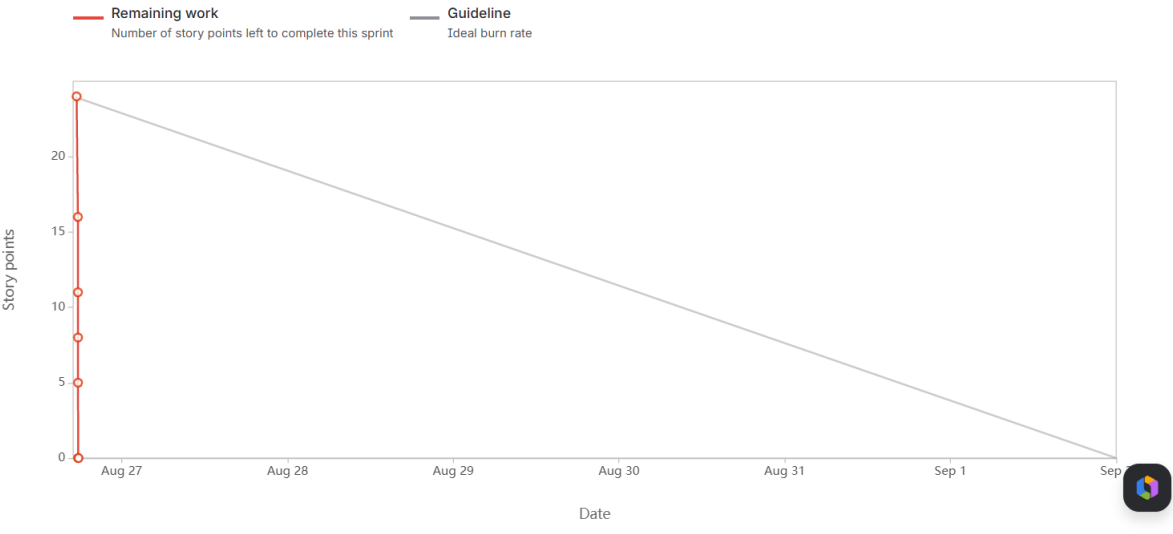

Estimation field

Story points

Date - August 26th, 2026 - September 2nd, 2026

Sprint goal - Implement mentor recommendation, mentor availability, and booking validation functionality.

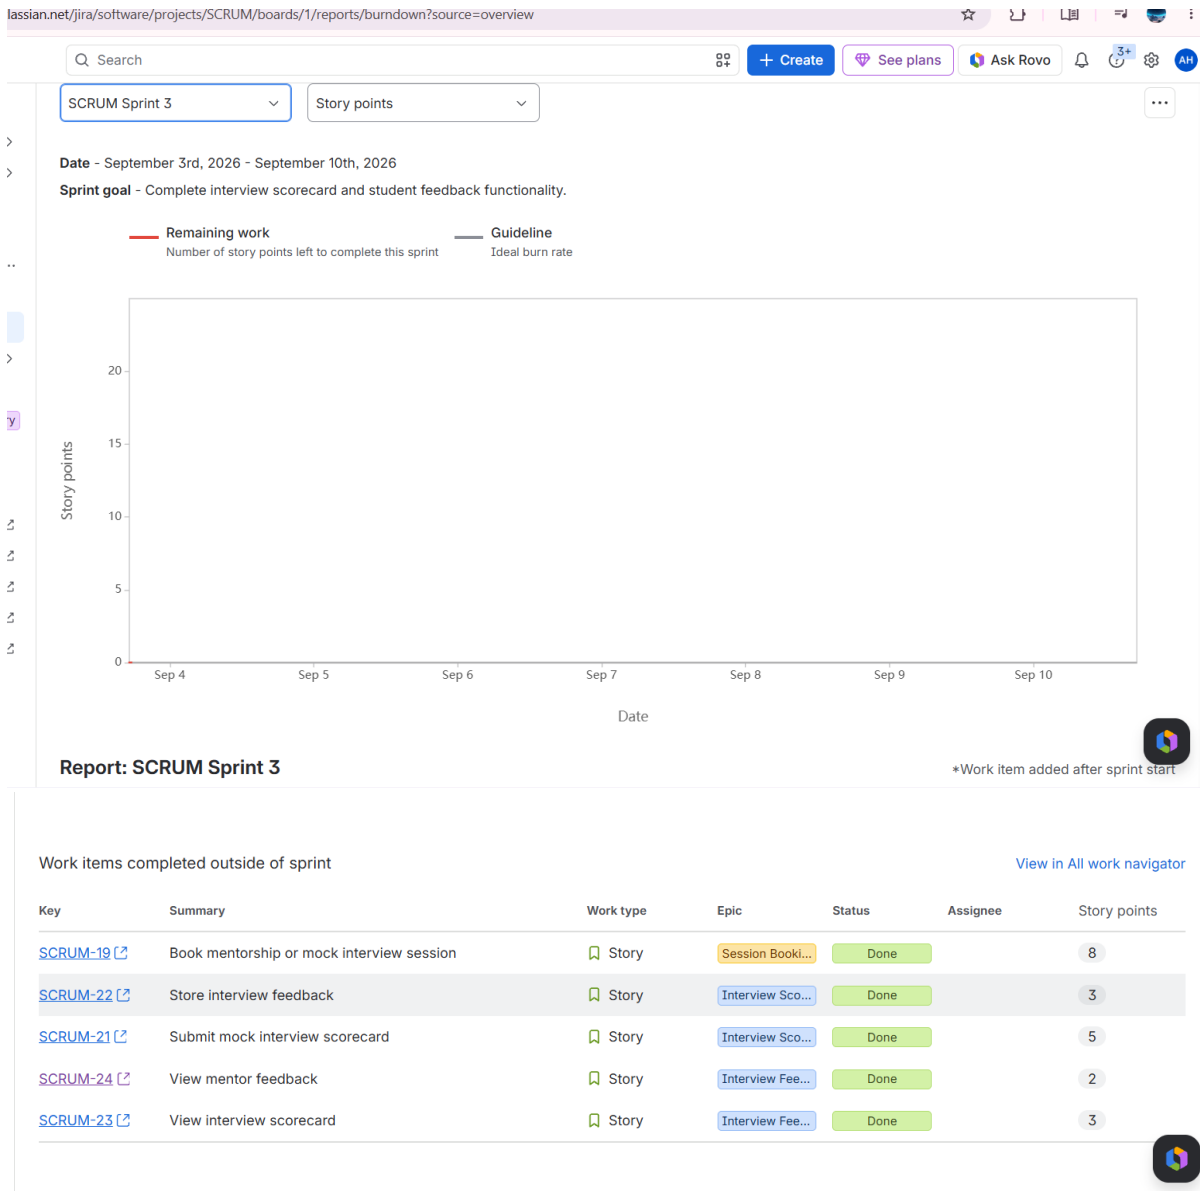

Completed work items

Work items completed outside of sprint

Reflection

1. Did your estimations reflect the effort?

Yes the Story Point estimates gave an idea of the effort needed for the user stories. Each story had Story Point values depending on how hard it was. In Sprint 1 the team planned 24 Story Points. Finished all the work they planned. This showed that the estimates were good for the sprint.

2. Was your backlog well-prioritized?

Yes the backlog was arranged based on how important each part of the system was. The main features like mentor recommendation, mentor availability and booking validation were done first in Sprint 1. The other features like interview scorecard and feedback were done in a sprint. This helped the team work on what was needed for the project.

3. How did your simulated sprint align with your plan?

The simulated sprint followed the Scrum process. The stories moved through To Do In Progress In Review and Done as the work was done. Sprint 1 finished with all 5 stories and 24 Story Points done. The other 5 stories were completed later. Jira marked them as done outside the sprint. This showed that it is important to update the status while the sprint is still going.

4. What insights did the burndown chart give about your teams capacity?

The Sprint 1 Burndown Chart showed that the team reduced the remaining work from 24 Story Points to 0. This meant that the planned work was possible in the sprint. The big drops, in the chart showed that many stories were done quickly. The Sprint 3 chart also showed that updating work items during the sprint is important. The stories that were done outside the sprint did not show up as part of the burndown.
